About This Game

WARNING: Some players may find the theme/content of Judgement disturbing. If you are sensitive to disturbing thoughts/images, play at your own risk.

Judgement is a story-driven, decision-making adventure game, where your Judgement can mean the difference between life, death, or somewhere in between. It's a game of morality and how gray it can be. In addition to a polished combat system, Judgement features a dynamic story where each decision leads to a different outcome in the game. In all, there are thousands of different combinations of choices the player can make, so each player (or playthrough) will have a different experience and a different ending.

The game is trickled with collectible notes, which offer food for thought when it comes to decisions that the player will make, or already has made, in the game or in real life.

Judgement, in its first form, was created when the designer was at the angsty age of 15. The perspectives and themes have their origins in a 15-year old boy trying to tell a story. It's been worked on here and there and has reached the point that it's at today.

Title: Judgement
Genre: Adventure
Developer:
Nathan Archer, Luke Brown, Dan Kramer
Publisher:
Newfa Games
Release Date: 15 Sep, 2015

a09c17d780

Minimum:

OS: Windows 7

Processor: W

Memory: 12 MB RAM

by far my favorite train in TS16, I love the way the trains looks, and feels and is lacking the bugs that most DLC for TS come with. The cab signalling is fantastic. Simply concept that works

Press and hold the space bar or let it go it's up to you the better you get the more you get.. Game without menu and Esc closes the game without any confirmation XD. My least favorite in the series. It has cards but no achievements. Powerups are too OP if you have the cash for them, which you usually do, so the game can be easily breezed through. However, it's not a bad game on sale, but for full price I personally do not recommend it.. Horribly done metroidvania game.

Flow of story is broken by introduction of new environmental mechanics completely contrary to the exact same mechanic encountered earlier in the game (Hit E when you can't blow the vent away with your gun).

Robots can shoot through stuff and at angles you can't, but should be able to since the bipedal robots can shoot at that angle, and you yourself are a bipedal human.

Graphics are 8bit, and done in a very smooth, aesthetically pleasing fashion.

But again, be prepared for arbitrariness on the hand of the game developer.. While this game looked like it could be quite promising, it's lack of stability/compatibility makes it unplayable. Have tried two different computers with radically different hardware but both within recommended spec and the game has failed run or crashed every time.

With this in mind I cannot recommend this game. Really fun game with portal like puzzles without the portals offcourse.. This game is unique, but it lacks content. Challenging yet no replay value. It is an action game with repetitive moves, which you can as combos, assassination, stealth and whatever there is to fulfill your revenge.

Not worth its price, but it was worth paying a dollar.

Fun Value 3/5

Difficulty 5/5

Replay value 2/5

Overall 3/5. It's a fun concept that's been done before and this would be an decent take on it if it were more polished.

Pro:

Fun and simple

Controller support

Cheap

Cons:

Not enough levels (finished all of them in less than 2 hours)

Buggy: some missions prevent you from using special abilities

Took a while to figure out how to get into co-op

I'd recommend this, considering the price, if it were longer and less broken but as it stands I can't.. Love the single player aspects of the game, love the modded community and the missions\mission packs they create. No negative opinions on the game I just wish the modded community was as big as MOWAS2's. I understand buying a DLC for new missions but I just don't wish to see it be repeated. Defense missions would be nice.

Just give these game a try, you won't be disappointed. Playing this feels right. Developers, thank you for these beautiful piece of art. =>. "i really loved this game because i love to scare myself" -KillerBoy-. I bought this game just cause I saw this dev can reply each questions he saw. Very kind of him. This Game Legit Was Worse Then The Day I Got Over By Obama And ISIS

. It's fun if you're into this kind of genre, but it's definitely not a game you play for the plot.. Repetitive
